Title: Succeeded in endodontic challenges – proceeding in complex cases

Duration: 60 minutes

In modern endodontics, the adequate approach of professionals, gives possibilities to preserve the teeth, even in challenging clinical situations. The Lecture will review the possibilities of endodontic treatment in particularly complex endodontic cases, including dental trauma, resorption and non-surgical retreatment. The aim is to discuss the strategies of diagnosis, planning and proceeding, that can give predictable result in endodontic practice. Main task is to emphasize conservative and biological approach to turn difficulties into success.
